Clinical Track Scholarly Contribution

Clinician-Individualized Portfolio: an opportunity for the faculty member and chair/section/division chief to develop a pathway combining features of the multiple pathways noted above with clearly articulated goals and metrics.

My clinical research interests include improving methods of prostate and bladder cancer detection. Over the years, I have also been active in exploring how social media can be used as a tool to help educate patients and physicians. More recently, I have expanded my clinical research efforts outside of urology. These efforts now include attempting to better understand how exposure to childhood trauma impacts the health and wellbeing of patients and physicians and how trauma-informed care might help reduce gun violence in our communities.
